Join HP, Microsoft, and <Company Name> for a Realize Business Continuity through Virtualization Workshop

Driving Application Availability Up and Costs Down

Attend a business continuity workshop where you will learn how to protect your business-critical IT infrastructure through virtualization. See how Microsoft virtualization and HP storage solutions can increase application availability, reduce overall costs, and improve infrastructure performance.

HP has teamed up with <channel_partner> to help you realize business continuity through virtualization. During these informative workshops, we will review:

- A complete high-availability and disaster-recovery scenario demonstrating how your environment could be equipped to handle various component and site failures
- The key virtualization components of Microsoft® Windows® Server 2008 R2 that enable business continuity including Hyper-V™, live migration, and failover cluster
- Built-in high-availability and disaster-recovery capabilities of the HP P4000 Multi-Site SAN storage infrastructure, which complement this business continuity solution
- How you can cost-effectively implement and manage this easy-to-configure joint solution

Agenda (local time)

- 11:00 a.m. Registration
- 11:30 a.m. High-availability and disaster-recovery scenario, presentations, and lunch
- 1:30 p.m. Adjourn
